

FOR IMMEDIATE RELEASE - PTV America Introduces eLearning for VISSIM®

Introduction to VISSIM eLearning is a self-paced online training course that allows you to master the basics of VISSIM in fourteen guided modules. Student feedback shows progress, scores, and student notices. Each professionally narrated module features lesson slides that show you how to use VISSIM and is structured like our classroom training. Modules provide users with VISSIM traffic engineering application fundamentals including:

- Understanding the basics of simulation
- Developing VISSIM networks
- Programming fixed time & actuated controllers
- Modeling transit operations
- Collecting output
- Creating 3D animations and AVIs

eLearning allows you to capture screenshots, take notes, give feedback, and repeat lessons where you would like extra exposure on a topic. Instruction is followed by short quizzes or 'try-it' and 'know-it' modes where you can practice tasks in VISSIM and be evaluated on the topics you just learned.

VISSIM eLearning is a great option for tight training budgets with online access from any available internet connection, no travel expenses, and individual course registrations offered at \$350. Upon completion of the course you will receive 14 professional development hours - great for engineers and planners who need them to maintain professional certification credentials. Agencies who need training for several people can save even more - please contact PTV America for more details about organizational discounts.

With robust interactive content, eLearning is a great way for experienced users to refresh your skills and stay current with new features.

PTV America updates eLearning courses periodically to provide the latest content and is developing new online courses. Look for the release of Introduction to VISUM eLearning in early Fall 2009.
